

AIRPORT BARRIERS

Our low height runway barrier system is designed making it less bulky and less prone to interference when compared to traditional airport barriers. Made in Non Fading and UV stabilized Red, White, Yellow etc, these barriers even with their low height profile stand out on the runways. The optional light and flag capabilities make it a highly effective tool at night and in poor weather conditions. Additionally, these airport barriers are manufactured from durable plastic material which can withstand the wear-and-tear of a busy airport environment. With alternate White reflective tapes, these barriers are easy to spot at night too. Low height of these barriers keeps them well below the jet blast. They can be easily deployed by one or two people and no heavy equipment is needed.

Frontier airport barriers are UV stable and fade resistant and can be filled with water or sand to increase stability during windy conditions. Frontier runway barrier systems are a proven product at several domestic and international airports including air force stations.

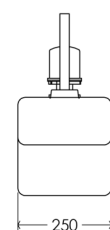

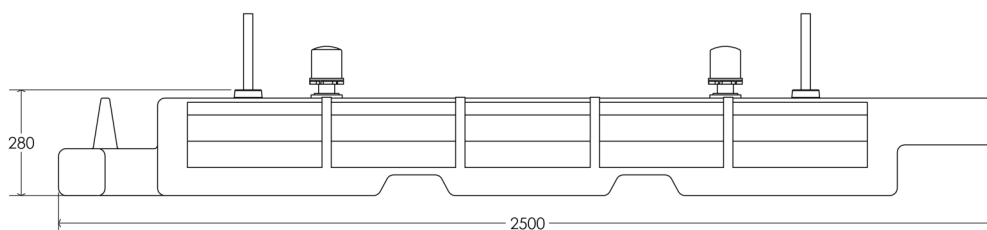

Area for water filling, flashing lights and pre drilled holes for mounting warning flags

INTERLOCKING BARRIERS ENABLE CONTINUOUS LINES

Dimensions:

Length (mm)	Width (mm)	Height (mm)	Water Ballast (Lts)
2230	250	280	125
